

Falcon Refinery Superfund Site:

In an effort to protect human health and the environment, the EPA, the Texas Commission on Environmental Quality, and the potentially responsible parties have and are obtaining numerous soil, surface water, sediment, and ground water samples from the Site for analyses to determine the nature and extent of contamination from the Site. Stormwater from the Site flows into Redfish Bay and adjacent wetlands. Seven endangered and five federally or state-listed threatened species exist in the project area. Redfish Bay is also used for recreational fishing. Redfish Bay flows into Corpus Christi Bay which is also used for recreational and commercial fishing. Corpus Christi has a population of approximately 312,195. The investigation and cleanup of the Site will ensure the protection of human health and the environment.
